General Product Price List (Catalog)
D.D.R. Min für Planung Aug 1960

The most significant change beyond the previous goods-listing comprises the adoption of "statistical values". (Mess werten). These values serve, as the measurement-numbers, exclusively statistical objectives in the establishment and control of the gross production values of the people's economy plans and by no means always correspond to the real price of products in effect. (The "catalog" describes the 10 segments of goods with subsequent subdivisions - and a code system, rising up to 8 digits.

The 3-digit groups are basic industries:

Elektrotechnik 360 (361-369)

Optik & Feinmechanik 370 (371-379)
